Basic and Applied Concepts of Immunohaematology, 2nd Edition

By **Kathy Blaney & Paula Howard**

Clear and accessible, this text addresses the fundamental knowledge and skills you need to work in a blood-banking laboratory. It integrates basic theory — genetics, immunology, and immunohematology — then adds practical, problem-solving exercises. Clinical scenarios and critical thinking exercises help you apply basic concepts to modern transfusion and blood-bank settings.

New to the 2nd edition:

- New information reflects changes in the field, including:
 - Different types of DNA testing and uses
 - Automation impact and issues
 - Latest donor criteria from the AABB and the FDA
 - Hepatitis C and HIV NAT testing
 - West Nile testing
 - Bacterial contamination statistics and prevention
 - Bone marrow transplant blood use
 - Peripheral stem cell collection
 - Cord blood collection and use
- More case studies, examples, and flow charts in the Antibody Detection and Identification chapter help to illustrate principles and practices.
- Margin Notes are added throughout to reinforce key terms and procedures.
- More review questions are added for thorough and efficient self-assessment.
- Expanded Evolve resources include web links, ArchieMD animations, and additional study questions

The Editors:

Kathy D. Blaney, MS, BB(ASCP)SBB, University of Central Florida, Medical Laboratory Sciences, Department of Molecular Biology & Microbiology, Orlando, FL; and

Paula R. Howard, MS, MT(ASCP)SBB, Micro Typing Systems, Pompano Beach, FL
