American Psychiatric Publishing Textbook of Substance Abuse Treatment, 4th Edition

By Marc Galanter & Herbert Kleber

A trusted and authoritative resource through three editions,

The American Psychiatric Publishing Textbook of Substance Abuse Treatment has been fully updated to present the most current scientific and clinical information on a wide range of substance use disorders, from tobacco and alcohol to methamphetamine and “club drug” abuse. It is a comprehensive guide to treatment written at a level appropriate to both experienced and new clinicians, reflecting the expertise of leading addiction specialists in psychiatry and allied fields. With most chapters extensively revised by new authors, it incorporates the latest biomedical research findings as well as recent advances in treatment modalities and the growth of pharmacotherapies.

The text offers a comprehensive view of the basic science and psychology underlying addiction as well as extensive coverage of all treatment approaches and specialty topics, such as Alcoholics Anonymous (AA). Coverage of therapeutic issues focuses on goals assessment and outcome research, emphasizing the knowledge needed to treat patients’ primary addictive problems by overcoming their defensiveness and denial through empathic engagement and maintaining a willingness to persevere through the vicissitudes of recovery. Practical, treatment-oriented material is presented in more quick reference tables than before to make the book an even more useful clinical resource, and lists of recommended readings have been enhanced.

Designed to serve clinicians in practice as well as researchers concerned with addiction, the textbook is also appropriate for trainees in psychiatry, general medicine, and other health fields. It is an invaluable source of treatment options for anyone concerned with the problems posed by patients with substance abuse disorders.

About the Authors:
